FRONT ENTRY

By these photos it is hard to imagine that we are only eight weeks away from the main entry's completion. However, the structural steel beams are in place, and the interior framing, rough-ins, and window framing are complete. The roof decking is 80% done. External surfaces have a weather proofing membrane (green in these photos). Sheathing is complete and sheetrock will begin in four days.

The new front entry and gallery will provide both inspiration and enhanced safety for faculty, students, and families.

Before

After

As a part of our HVAC replacement, our fuse box system installed in 1953 was upgraded to a modern electrical circuit panel.

BUILDING ADDITION

Our building addition, which will house middle school classrooms, collaboration spaces, and fine arts classrooms, is the most visible change to our campus. Structural steel framing is complete and most of roof decking is complete. The Fine Arts Corridor's hollow core panels will be set soon.

Staff and students were recently guided on a tour of the new building and signed their names on the block wall of the Fine Arts Corridor.

The 10,000 foot addition sits to the south and east of the school's gymnasium. Students love the structural steel window frames, which add to the stunning design of the new building. All window blocking has been completed. Students are excited to all be under one roof and they could be heard saying the collaboration spaces will be their new favorite space to work with their friends.
